

Vladimir Beliaev

Full-stack Engineer (Web & AI)

Tbilisi • +7 (978) 129833 • vvladimirbeliaev@gmail.com • [Portfolio](#) • [GitHub](#) • [Website](#) • telegram: @vvbeliaev

Summary

Full-stack engineer with a background in ML and data-driven systems. I design and build modern web products end-to-end: from fast, SEO-friendly frontends to scalable backends, infrastructure, and LLM-powered features. My philosophy is ship, ship, ship – delivering value quickly while keeping code quality and architecture under control. I thrive in small, cross-functional teams and early-stage products where I can own a wide scope: product discovery, implementation, deployment, and iteration.

Experience

Freelance / Cogito Software 2024 nov - current time
Full-stack Engineer (Web & AI) Netherlands

[Agency](#)
Design and build end-to-end AI-driven web products for small teams and early-stage businesses. Own the full lifecycle: architecture, frontend, backend, LLM integration, infrastructure, and CI/CD. Delivered several production-ready systems, including AI storytelling, quiz generation for educators, CRM AI assistants, and internal knowledge bases. Tech stack: SvelteKit, Astro, FastAPI, Node.js, Postgres, Redis, Meilisearch, LangChain, PydanticAI, Docker, GitHub Actions, Coolify, Hetzner.

LLMAgent.ru | Enterprise Knowledge Base 2023 sep - 2024 nov
Full Stack Dev Moscow

[Product](#)
Internal AI assistant that ingests corporate documentation and answers employee questions with source-aware responses. Implemented ingestion pipelines, search over vector and text indexes, and role-based access control. Stack: FastAPI, Elastic, Qdrant, Postgres

Projects

Quizbee.academy – AI Quiz Generator 2025 aug - nov
Tool for educators that converts learning materials into quizzes using LLMs.

[quizbee.academy](#)
Tool for educators that converts lecture notes and PDFs into interactive quizzes. Implemented content parsing, question generation using LLMs, and progress tracking with basic analytics for students. Stack: SvelteKit, FastAPI, Redis, PydanticAI, SOLID architecture principles.

Hackseeker.com – AI product validation 2025 sep - current
Platform for quick market validation and insight mining
[hackseeker.com](#)

Interactive platform where users co-create stories with AI. Built real-time text generation flows, branching narratives, and character consistency checks on top of custom LLM pipelines. Stack: SvelteKit, Node.js, custom LLM pipelines, Docker, Coolify.

Education

Higher School of Economics – Computer Science Department
Machine Learning
9.5 GPA

Sep 2021 - May 2024
Bachelor's Minor

[hse-ml-minor](#)

Built a strong foundation in machine learning and deep learning: from neural network internals and optimization methods to practical model training and evaluation.

Skills

Web Development

End-to-end web application development

◆◆◆◆◆

JavaScript / TypeScript, Svelte / SvelteKit, Astro, React, Next.js, HTML / CSS, Tailwind, SPA / SSR / SSG, SEO optimization

Backend & Architecture

Server-side logic and system architecture

◆◆◆◆◇

FastAPI, Node.js, Go, Python, Postgres, Redis, SQLite, Meilisearch, Elastic, Hexagonal Architecture, SOLID, API design

LLM-based Development

Building AI-powered products with modern LLMs

◆◆◆◆◇

RAG, LangChain, PydanticAI, Custom agents, OpenAI API, DeepSeek, Claude, Prompt engineering, PyTorch

DevOps & Infrastructure

CI/CD and self-hosted deployments

◆◆◆◆◇

Git, GitHub Actions, CI/CD pipelines, Docker, Coolify, Linux, Hetzner, cloud / self-hosted deployments

Interests

Self-hosting & infrastructure tinkering

raspberry-pi, coolify, linux, server-configuration, hetzner

Languages

English

professional working proficiency

◆◆◆◆◇

Russian

native
